

RISKS

Identify risks earlier, mitigate them sooner.
Complete visibility.

We've created Rivo Risks to transform how you manage risk by bringing corporate and operational risk into a single application. That provides you with complete, company-wide visibility of hazards, risks and risk assessments, meaning you can spot trends earlier and implement corrective and preventative actions faster.

Using Rivo will help you:

- ✔ **Quickly identify risk and hazards across your organization**
- ✔ **Standardize risk assessments so you can compare sites and divisions**
- ✔ **View risk data in real time, the way you need to see it**
- ✔ **Save time by creating a 'hazard library' unique to your organization**
- ✔ **Manage risk from a central location to ensure a coherent response**
- ✔ **Use geo-maps to highlight and identify risk hotspots**
- ✔ **Automatically 'roll up' risk scores across all levels to save time and effort**

Everything now is in one place so we don't have to hunt down the information from various different sources – it is all held centrally giving us clear visibility and control. The reporting function enables us to identify patterns and trends so that company-wide measures can be put in place to prevent reoccurrences.

Glenn Davies, Director of Quality, Health, Safety & Environmental, Veolia

Manage all your risk centrally

Manage all of your company's risk - however it's identified - in one central application to ensure a measured and coherent response. You'll get full visibility of all corporate and operational risk regardless of the level it's at.

Understand risk at any level

View and analyze risks at any level, including: local, regional, team & company-wide. You can then tailor a response to mitigate these risks and deal with them centrally or locally.

We now have an improved method of identifying the risk areas and security gaps within the business and it has reduced the risk of loss across the group, allowing us to focus resources appropriately to prevent reoccurrences.

Garry Spicer, Head of Profit & Loss Prevention, Wincanton

Identify risk hotspots

Our geo-mapping feature helps you identify problem areas by looking at both location and function. You can then employ other Rivo applications such as Actions & Remediation or Monitoring & Testing to help implement control measures and mitigate the risk.

Standardize your risk assessment process

Rivo helps you automatically standardize how you carry out risk assessment across your organization. You'll always be using best practice as well as getting a consistent 'global view' of risk.

Manage risk more efficiently

We've kept data-entry to a minimum and made the whole process quicker by automatically populating where you are, who you are and other key facts.

Keep the right people in the loop

We've put escalation and notification at the heart of Rivo Risks. You can make the right people aware of obligations or emerging risks using our activity stream, email alerts and exportable reports.

Our apps are built for performance:

- ✔ **99.9% uptime and central secure cloud storage of your data**
- ✔ **Multi-platform support (including mobile) so you can manage risk anywhere**
- ✔ **24/7 total support by phone or email as standard, so we're always here to help**

Create a hazard library unique to your organization

Rivo Risks helps you build your own custom hazard library over time. This means you can save time and effort entering in the same hazard types, for each risk assessment, as Rivo pre-populates certain form fields for you.

Automatically 'roll up' risk scores across all levels

Rivo Risks can automatically aggregate risk scores to present a site, region or business unit risk rating, which helps managers prioritize and allocate resources for control measures.

About Rivo

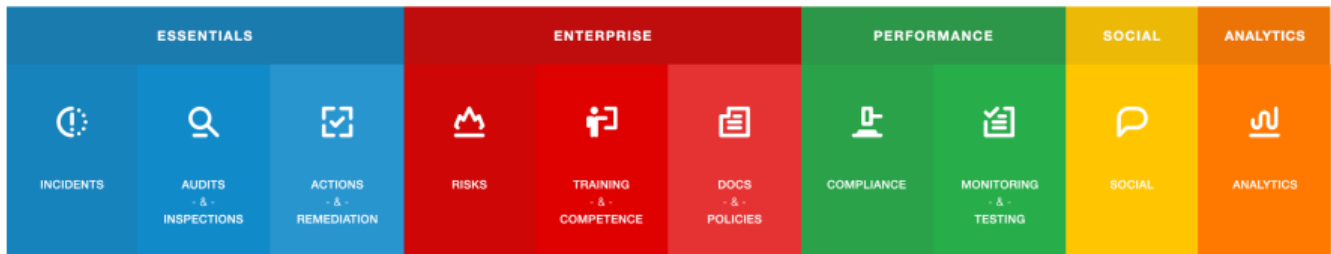

At Rivo, we've built market leading applications that transform how EHS and risk is managed. No matter the size of your organization, how many sites you have, or where they're located, our apps will help you automate repeatable tasks, engage your employees and deliver razor sharp insight. We have over 180 clients across 86 countries, and our apps help them protect people, assets, environment and profits in their companies.

Rivo is recognized in the Gartner Magic Quadrant for Operational Risk Management, the Gartner Magic Quadrant for Environmental, Health and Safety Management Systems and is a Red Herring Top 100 Winner for disruptive software.

Risks is just 1 of our 10 applications. All our apps work seamlessly with each other to help you build the most effective EHS platform for your organization.
